<i>Project Profile #2</i>		Jan 2010 – May 2010
<i>Project Name :</i>	Chargeback Management System, Pune.	
<i>Company :</i>	Aerosoft Systems Pvt. Ltd. Pune	
<i>Client :</i>	(India's best Payment Gateway and Bank)	
<i>Role :</i>	Team Member, Software Engineer.	Team Size : 6
<i>Technical Environment :</i>	C#.Net, ASP.Net, Java script, SQL-2005	
<i>Client/Project Description.</i>		

For merchant as well as Payment Gateway Company handling and processing charge-backs is often a time consuming and manually intensive process. To defend charge-backs merchant has to provide several documents in a rather tight time frame to card issuing company. This leads to numerous validations and exchange of documents. Current communication methods used for exchange of documents and information include emails, telephone calls. Additionally, handling charge-backs is a fairly manual & paper intensive and hence person specific.

Individual Responsibilities.

- ✓ Understand current manual process for chargeback handling.
- ✓ Develop the SDLC and its actual Flow, Flow charts. Develop master for merchants, PGP, documents, alerts, banks, bank rules. Creating cauterized web application having two sub sites one for Payment gate ways and one for Merchant support.
- ✓ Design individual Workflow for process to capture chargeback data make raise alerts to respective merchants on their dashboard. Develop web services to provide screen access to merchants and PGP users. Develop data upload, download, zip and unzip functionality.
- ✓ Maintain audit trail of each alert raised cases and handling chargebacks.
- ✓ An alert also generates schedule SMS and E-mail service for Merchant users as a high alert notification message.
- ✓ Handling users as Administrator level and operational level users. According to user levels admin can assign task and view charts and reports on his dash board.

<i>Project Profile #1</i>		May 2009 – Dec 2009
<i>Project Name :</i>	Aircraft Utilization Monitoring and Fuel Recon, Pune.	
<i>Company :</i>	Aerosoft Systems Pvt. Ltd. Pune	
<i>Client :</i>	India best Airline. (Fuel and Aircraft Maintenance Dept.)	
<i>Role :</i>	Team Member, Software Engineer.	Team Size : 5
<i>Technical Environment :</i>	VB.Net, ASP.Net, Java script, SQL-Server 2.0	
<i>Client/Project Description.</i>		

It is a low cost carrier airline company, we develop AUMFR web Application. These Application reduce all disconnects between each department, its Aircraft Utilization calculations. Provide station wise access to each person. Reduce their billing process of fuel cost, Aircraft landing cost, smacks cost etc. All departments' wise MIS reports are calculated so faster rather than current process. All Aircraft utilization process and its calculation are done automatically.

Individual Responsibilities.

- ✓ Involve in Aircraft Fuel consumption and Landing cost calculation.
- ✓ On Arrival Station Aircraft broadcast packet (ACAR) about its detail information. We receive it and parse it and map its required parameters.
- ✓ Using C# Develop Web services for uplift of fuel, landing cost for station and its duration.
- ✓ Before departure of every aircraft the web services shows fuel information (i.e. in tank, uplifted, oil consumption, and average consumption and landing information.
- ✓ Once this activity becomes automated all departments MIS reports are calculated faster and save losses over Fuel utilization and landing cost (i.e. landing cost is based on hour basis).
